

## Pant Rack Installation

Tools Needed: Philips screwdriver

Separate the inner slide from the outer slide by extending and depressing plastic tab.

Mount the thin smaller side to the partition using 4 euro screws (see pic below), align the 2nd hole of the slide with the 1st row of holes of the partition (2nd row if 18" deep). The rear hole will now be aligned with the rear holes of the partition.

Thread the 4 #10 x  $\frac{1}{2}$ " screws through the crossbar into the slide flanges, leave screws loose.

Gently guide and push the pant rack onto the mounted rails. Tighten screws.

Press fit the pivoting rack fingers into rear cross bar.

Note: Recommended height of pant rack is 24" from floor.

Euro Screw
